Newco Enterprises, Inc.We Can Help! 800.837.8327 We Can Help! 800.837.8327 Bunn began manufacturing coffee making equipment for commercial kitchens and restaurants in 1957. Today, the Bunn product line includes coffee makers and grinders, tea brewers, thermal carafes, and other coffee maker parts and accessories. Strong enough to handle the needs of a popular coffee shop and affordable enough to serve a small town diner, Bunn’s brewers are made with highquality parts and materials. It’s no wonder so many Ohio dining establishments have Bunn coffee machines in their kitchens. These same businesses know that even the best machines need regular cleaning and maintenance.

Roundtheclock use, improper handling, and lack of cleaning can cause parts to wear down and malfunction. That’s where we come in. CPS Ohio is trusted as a BunnOMatic OEM replacement parts provider. Our replacement parts are certified by the manufacturer and are always guaranteed to fit. Our inventory of BunnOMatic OEM parts includes everything from warming elements to replacement faucet springs. In addition to our extensive parts inventory, as our name implies, we also employ an expert team of service technicians that can respond to requests from customers across a large geographic area. If your Bunn coffee machine is experiencing problems, our team will

personally visit your establishment and fix them on the spot. Our technicians are welltrained and have decades of combined experience working with Bunn products. We also only use certified Bunn replacement parts that are exact matches to the parts on the machine. Please choose a different delivery location. Brewing with real tea leaves and steeped the traditional way, BUNN tea brewers deliver the freshly brewed tea taste most customers prefer. The TB3Q offers fast brewing, up to 26.7gallons per hour. This lowprofile model has a compact height of 28.75inch so it fits almost anywhere. From a single cup to a fivegallon batch you can count on BUNN tea brewers to brew perfect tea.

To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Sylvia Roland 4.0 out of 5 stars Now that we are using it, it is doing fine. We had to call the company to get someone to talk us through installation. I am in the process of returning the bunn. Once setup it is as simple as throwing a 3gallon tea bag in the filter basket, pressing the power button and then the start button. I KNOW the label said there was nothing serviceable by the consumer behind the back cover, but removing six screws and tightening one brass nut allowed me to use the unit for our meal that night rather than packing it back up. Of course I unplugged it first. Don't think you'll have this problem and I would recommend this unit highly! Since I was 1 day away from opening our new restaurant, I had replacement ordered. The guy who installed was not able to do another call for me that quick. The 2nd one showed up on day of opening. I got it installed on Saturday 1 day after it arrived. This one ended up leaking as well. The tech began to look at everything on both machines

and noticed the valve where the hot water goes was not even screwed tightly. Instead it was just barely on both machines. He said it should have been more secure than that, but not all the way tight. ALL I HAVE TO SAY TO BUNN BE BETTER THAN THIS!!!! IF you stand behind your product so much you have to put a PRIDE STICKER in the machine, make dang sure its 100%. This tea brewer has a quick brew feature which creates shorter brewer cycles, and able to hold 3 gallons at once. The SplashGard funnel keeps hot liquid from the operators hands, and an adjustable steep time gives you control over flavor extraction. Product excluded from promotions and coupons. Note Image is a representation.

Please call to check status. There's nothing more refreshing than a big glass of iced tea, so make sure you have enough on hand for to quench even the hardest thirst. Investing in a dedicated iced tea brewing system allows customers to get in, get their drink, and get on with their lives. Commercial iced tea makers typically come in three sizes three gallon, five gallon, or systems that have the ability to brew either three or five gallons. Simply choose the Curtis or Bunn iced tea maker that best fits the needs of your store, kitchen, or cafe, and start the summer season out right. Another feature to take into consideration is the operating functions. If you're looking for something more adjustable, however, you're in luck. Curtis and BUNN both currently offer iced tea makers which feature the ability to select brew size, as well as flavor profiles. The Curtis and BUNN Iced Tea Brewer take a little more training to use properly, but the payoff is a customizable batch of tea that will leave your customers smiling. The company is committed to delivering the highest possible quality beverage in each cup through its complete line of dispensed beverage equipment including coffee brewers and grinders; liquid coffee dispensers, iced tea brewers; hot chocolate, granita, and juice machines; precise temperature water systems; water quality systems and paper filters. BUNN assures high quality products by adhering to strict guidelines at production plants. This dedication to quality resulted in an upgrade in the manufacturing facilities quality management registration through ISO 90012008. The global headquarters is located in Springfield, Illinois, USA, where the company strives for total customer satisfaction through superior equipment and unmatched customer service with support from plants and warehouses in five North American locations, as well as warehouses or offices in Mexico, Brazil, Germany, China and the United Kingdom. When it comes to Bunn equipment maintenance or repair look no further than Eichenauer Services can help. For over 65 years they have been offering affordable, courteous and professional Bunn equipment repair for their customers throughout Illinois.

As well as performing repairs on BunnOMatic equipment Eichenauer services is also a distributor of Bunn coffee, tea and other beverage equipment replacement parts. Eichenauer Services Inc.. View on Mobile. Something went wrong. View cart for details. All Rights Reserved. You will need to put the tea container in place, put the on off switch in the on position and push the start switch. This will need to be done 3 times total to fill the tank. Halfway threw the third cycle it should start to dispense from the spray head. You can now turn the thermostat all the way up. In other words, the cold water part of the brew cycle is separate from the hot water part of the cycle, if you put in less cold water, and want to keep you container filling to its current level, you would need to increase the

hot part of the brew cycle to make up for it, other wise it will brew less into your normal container. Hope that helps, and thank you. If your doing manual fill pour over the timer has nothing to do with that. If its plumbed with a water line, before you start changing your timer for the brew cycle, first try the easy fix which is unscrew the spray head. Take the cleaning spring tool and rotate it as you push it thru the tube you just unscrew the spray head from. As your pushing it thru it has two turns in it. Just rotate and push until you have gone thru the second one and then its clear to the water tank. Unfortunately this doesnt always get it unplugged. Where the tube goes into the water tank there is silicone hub on the part thats in the tank and it can keep some of the lime buildup from being removed. You will have to take the top off and remove the tube to clean it if that happens. Dont forget to unplug it first. The other common spot for a restriction is where the water leaves the pan your pouring into. You need to remove the pan to get the spray tube out anyway so look also at the big nut that holds the pan onto the tank. sometimes the hole will plug in the center.

<https://www.zulfugar.nl/wp-content/plugins/formcraft/file-upload/server/content/files/1626d6af438bb9---3g3mv-a4075-user-manual.pdf>

Water does not heat. Water will run out if brew button pushed, but of course it is cold Try changing to a different coffee and see if the strength is better. Ive maintained the machine according to Bunn's guidelines. Any suggestions The power is working, but should I be concerned about the flickering You can check for a bad connection by tuning a nearby radio receiver to no station in the AM band. If there is a bad connection causing this youll hear the sparking in time with the flickering on the radio. Flickering is a common effect seen with neon indicator lights when they age and does not affect the switch function at all, so can be safely ignored. You can get rebuild kits for the older ones or just replace the valve Examine it closely. If we plug and unplug it several times, it will work. If any of these have faulted that condition will arise. I suspect that the temperature sensor is sticking in the open position. If you remove the bottom cover while unplugged of course and lightly tap the sensor with your screwdriver it may remedy the issue for awhile but the initial cause of the problem will still exist. If the brewer is worth it you can replace the sensor otherwise it may just be cheaper to recycle it. Answer questions, earn points and help others. Call us at 18002395152 Call 18002395152 For additional OEM parts and manuals visit partstown.ca MON FRI 730AM 700PM ET. All multicup coffeemaking machines water levels can be adjusted on all their machines. Bunn refers to altering the amount of water for pot of coffee as adjusting the brew level on the machine. Adjusting the brew level can be raised or lowered with a press of a button. See if the tank is filled to the recommended level for the model you have. If the machine has a water line attached, check the connections on the line to make sure it is supplying water as it should. This switch is located on the switchboard if needed, remove the back of the machine to access the switch.

Release the button as soon as the clicks are heard. If the button is pressed for two seconds after the click, the setting will not change. Each press of the button will increase the amount of water released by the coffeemaker by two seconds. This will change the amount only for this brewing. Press and hold the button until three clicks are heard and release. This will decrease the amount of water released. This will change the amount only from this brewing. Watch as the machine releases water. He is a mortgage specialist with over 12 years of experience as well as an expert in financing, credit, budgeting and real estate.
